

Plant Operator

We are looking for energetic individuals who are seeking to work with a group of people, rotating on a roster basis, covering 24/7 operation.

As a Plant Operator, you will primarily supervise the operation of a modern semi-automated plant, troubleshooting and modifying plant settings to ensure its optimal efficiency. Furthermore, you will be requested to operate the company's cylinder filling stations and ascertain that the products are in compliance with the established standards. The necessary job training and guidance will be provided to the designated individual.

The ideal candidate will hold an Advanced Diploma in a Technical Subject (MQF Level 4) ,OR a Technical Diploma (MQF Level 3) coupled with one year experience , OR an A-level standard of education in two science subjects coupled with 3 years' experience in a similar role.

The persons we are looking for, should also be highly organised, hands-on, team players, willing to enhance their knowledge and gain the expertise required.

Plant Engineer

As part of our dynamic investment plans, we are offering an exciting career opportunity within the medical and industrial gases sector as Plant Engineer.

We are looking for a career driven employee who is willing to take up the challenge and benefit from the knowledge and support of an experienced technical team. The ideal candidate will receive professional training both locally and overseas in the relevant field of specialisation. As Plant Engineer you will embark on a structured induction program to allow familiarisation with the plant operations. You will also have a unique opportunity to be involved in the introduction of new production plant on the site. In your daily responsibilities, you will be assisted by highly trained staff and report to the Operations Manager.

Among other duties, you will have a leading role in

- preparing the production schedule and programming the plant through an HMI
- scheduling and executing plant maintenance programs in liaison with the Technical Manager
- analysing plant performance through periodic reporting
- monitoring and ensuring safety and quality standards of all involved in plant operation
- assisting to troubleshoot faults and coordinate resolution with the Technical Manager
- recommending positive change in line with continuous improvement

The ideal candidate will hold a tertiary level of education in Engineering or equivalent, together with a minimum of two years' experience. The selected candidate must be highly organised, flexible, have a hands-on approach to problem solving, and willing to enhance his/her knowledge to gain the required technical expertise. Previous experience in a similar position will be considered an asset. The right candidate will be given the opportunity for further career development within the organisation.
